

Spatial Statistics course - preliminary meeting on Wednesday July 5 at 5 pm in FSR 4.3.

The course will take place Sept 18 – 29 and taught by members of the department of Ecosystem Modelling.

Registration in StudIP will be opened after the preliminary meeting.

Both MSc and PhD students are welcome.

The goals for the preliminary meeting are:

1) Clarify the type of spatial statistics covered in the course (point pattern analysis).

You may also have a look at our material on OpenIIAS for a first impression

http://openilias.uni-goettingen.de/openilias/goto_openilias_crs_1451.html

and of course you may look at the course description (M.FES.725 / course number 700294 in HISinOne EXA / StudIP)

2) Clarify organization of the course

Most importantly: we will complete all exams and presentations within these two weeks

3) Give background on the type of projects to be done in the second course week.

This way you have the opportunity to already look for appropriate data before the course.
