

About FBB

Forest Beautification Biomass (FBB), an entity of Shift Energy Group, seeks forestry professionals to revolutionize Japanese forestry. FBB's responsibilities include fuel provision for Biomass Plants with its lumberjack teams and educating local and foreign forestry workers. It aims to merge Japanese and German forestry for enhanced efficiency, sustainability, and safety. FBB commits to achieving sustainable forestry, end clear-cutting, offering accessible forestry education, and facilitating education exchanges between Japan and Germany.

Current Reality

Monoculture and clear-cutting still persists in Japan. Forests on steep mountains present a big challenge. Low efficiency and high accidents numbers are making the work field unattractive. Access to education is limited.

Open Positions

Forest Manager

- Develop, implement, and revise forest management plans.
- Supervise timber harvesting, logging activities, and forest road construction.
- Manage Relationships with other Fuel suppliers, contractors, Forest owners and the local community.
